BriefCam Video Synopsis Software Browse Hours of Video in Minutes!

BriefCam's Video Synopsis technology allows a user to take hours of video and condense the files into short clips, displaying hours of activity in minutes!

Video Synopsis tracks & analyzes moving objects, and converts video streams into a database of objects & activities. When a video summary is needed, all objects from the target period are collected and then shifted in time to create a much shorter video showing maximum activity. A synopsis video clip is generated, in real time, in which objects & activities that originally occurred at different times are displayed simultaneously.

BriefCam System consists of a hardware unit that connects to a LAN consisting of cameras and a DVR or NVR. The end user can access the BriefCam summary & index using a software client running on a PC. The software will allow the user to create & view video summaries, as well as index the original video data.

Operation Example:

Let's say you've got a camera looking at a loading dock and you want to see all of the vehicles that went to that loading dock between 9:00-5:00 yesterday. Using BriefCam you can condense those 8 hours of video into an 8 minute clip, displaying all activity that occurred at that loading dock in that 8 minute clip. All activity occurring from 9:00-10:00 would be displayed in the first minute, activity from 10:00-11:00 would be displayed in the second minute, and so on. Activities that occurred at roughly the same time (say 9:02 and 9:05) would be displayed overlapping each other. An activity that previously would have taken an hour or more has now been accomplished in 10 minutes!

An additional feature of BriefCam is the ability to search the video using certain parameters. You can search by color (show only blue trucks), direction (only people walking left to right), size, time, date, and more.

Video IQ – Rialto I4 Megapixel Analytics for IP Cameras

Small, fast, & easy way to transform IP cameras to active prevention solutions!

The Rialto I4 enables users to easily & economically add advanced video analytics to IP security cameras without replacing the system. The 4 Channel compact video analytic appliance supports either four D1 or two 1080p HD security cameras. The unit includes advanced video analytics, edge storage, & event management software.

Anywhere, anytime video monitoring is easily achieved with VideoIQ Mobile.

Features:

- Industry Leading Analytics
- Instant Event Notification
- On-board Storage
- 2-Way Audio Talk-Down

Example of Video Analytics Rules:

- Object, person or vehicle enters, leaves or loiters
- Camera tampering
- People/vehicle classification
- IQBeam Crossing
